

Github Website Tips

More comprehensive tips on website customization can be found [here](#).

Changing title and personal information	1
Editing 'about' page	1
Editing 'papers' page	1
Changing pdf CV	2
Creating new pages	2
Adding other social icons	3
Google site verification	3

Changing title and personal information

In the `_config.yml` file:

- `title: blank` # the website title (if blank, full name will be used instead)
- `first_name: David`
- `middle_name:`
- `last_name: Rose`
- `email: # you@example.com`
- ...
- `keywords: david rose, david, rose, stanford, philosophy, psychology, cognitive, developmental, teleology, causation, experimental philosophy, rutgers, google scholar, david rose stanford, david rose rutgers, david rose philosophy, david rose cognitive science, developmental psychology, teleological essentialism, causal language, causal verbs, cause and burn` # add your own keywords or leave empty

Editing 'about' page

Make editions to the about page at `_pages/about.md`.

- Change the title at: `title: About`
- Change the color of a word: `<span style="color: #00ab37;">This text will be green.</span>`

Editing 'papers' page

Make editions to the about page at `_pages/papers.md`.

- Change the title at: `title: Papers`
- Add additional lines to the file using the following format:

```
Author_name, N., **Bold_name, N.**, Author, N. (2024). [Title.]( {{ '/assets/pdf/...(Relative path to the paper)' |
prepend: site.baseurl | prepend: site.url }}) In *Proceedings of the Annual
Meeting of the Cognitive Science Society* (Vol. 45, No. 45).
```

- Github icon: `<a href="https://..." target="_blank" title="GitHub"><i class="fab fa-github"></i></a>`
- OSF icon: `<a href="https://..." target="_blank" title="OSF"><i class="ai ai-osf"></i></a>`
- DOI icon: `<a href="https://..." target="_blank" title="doi"><i class="ai ai-doi"></i></a>`
- Italic: enclose with a single star, eg. **this text will be italic**
- Bold: enclose with double stars, eg. ****this text will be bold****

Changing pdf CV

Replace `assets/pdf/rose_cv.pdf` with a new pdf with the same name.

Creating new pages

You can create new pages by adding new Markdown files in the `_pages` directory. The easiest way to do this is to copy an existing page from the original repo [here](#) and modify it. You can choose the layout of the page by changing the `layout` attribute in the `frontmatter` of the Markdown file, and also the path to access it by changing the `permalink` attribute. You can also add new layouts in the `_layouts` directory if you feel the need for it. Here's an example:

```
---
layout: page
permalink: /teaching/ (the path to access the page, https://davidrose.github.io/teaching/ in
this case)
title: teaching (the title that shows on the header and on the top left corner of the page)
description: Materials for courses you taught. Replace this text with your description.
nav: true
nav_order: 6 (order on the header)
---
```

(Main body texts below)

For now, this page is assumed to be a static description of your courses. You can convert it to a collection similar to ``_projects/`` so that you can have a dedicated page for each course.

Organize your courses by years, topics, or universities, however you like!

If you'd like to add a collaborator page, I recommend using [this](#) template, which will look like [this](#).

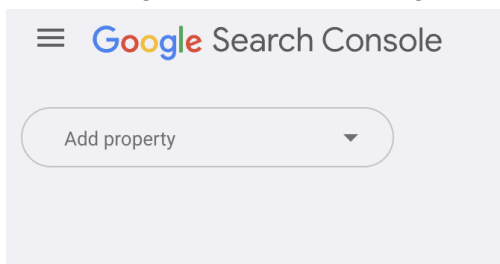

Adding other social icons

In the `_config.yml` file:

```
# -----  
# Social integration  
# -----  
  
acm_id: # your dl.acm.org/profile/id  
blogger_url: # your blogger URL  
bluesky_url: # your bluesky URL  
dblp_url: # your DBLP profile url  
discord_id: # your discord id (18-digit unique numerical identifier)  
facebook_id: # your facebook id  
flickr_id: # your flickr id  
github_username: davdrose # your GitHub user name  
gitlab_username: # your GitLab user name  
ieee_id: # your ieeexplore.ieee.org/author/id  
instagram_id: # your instagram id  
kaggle_id: # your kaggle id  
keybase_username: # your keybase user name  
lastfm_id: # your lastfm id  
lattes_id: # your ID on Lattes (Brazilian Lattes CV)  
...
```

Google site verification

In the Google Search Console, go to “add property” and click on “add property”.

In Select property type, choose the URL prefix option, enter the url “<https://davdrose.github.io/>” and click continue.

Select property type

Domain new

- All URLs across all subdomains (m., www. ...)
- All URLs across https or http
- Requires DNS verification

Enter domain or subdomain

CONTINUE

or

URL prefix

- Only URLs under entered address
- Only URLs under specified protocol
- Allows multiple verification methods

Enter URL

CONTINUE

On the verify ownership page, download the [.html](#) file. Copy it into the root directory of the github repo. Commit and push the changed github repo.

Verify ownership

<https://davdrose.github.io/>

Recommended verification method

HTML file

Upload an HTML file to your website

1. Download the file:  [googleb779ad17fb9afdb1.html](#)

2. Upload to: <https://davdrose.github.io/>

To stay verified, don't remove the file, even after verification succeeds.
